2nd Annual User's Conference Yields Terrific Results

Both Beck Technology and Users Expect a Great Outcome from Discussion

DALLAS (June 5, 2009) – Beck Technology (Beck Tech), a Dallas-based AEC software and services company, recently hosted the second annual DProfiler Users' Conference at the Omni Hotel in Las Colinas. With over 80 representatives from across the country in attendance, the meeting allowed companies to discuss how they each use the software inside their business.

While organizations ranged from architectural to governmental, one common theme emerged: DProfiler™ allowed users to really impress clients and prospective clients during the project pursuit process with added value.

This is the second forum of its kind that Beck Tech has hosted for DProfiler™ users. Coinciding with the annual BIM conference, the roundtable provides users with the opportunity to provide feedback on how DProfiler was working at each company. Based on this feedback, Beck Tech is able to make updates and enhancements to future versions of the software. Participants were pleased with the developments Beck Tech made to DProfiler from the 2008 inaugural roundtable. This year's feedback and response can promise to yield similar results.

The roundtable discussion also presented Beck Tech with the ability to put faces to names and allow for one-on-one feedback on many possible uses for the software. User presentations by The US Department of State, EMJ Corporation, Cox & Schepp Construction, Clark Construction Company, DPR Construction, Weitz Construction, McGough Construction, and The Beck Group proved to be a ringing endorsement for the DProfiler™ software.

"Using DProfiler™, I understand my projects better than ever using traditional methods of cost estimating," said Pat Tansey of EMJ. "After the success of last year, I can definitely expect superb advancements in the DProfiler™ software over the next few months."

The Beck Tech team was equally satisfied with the discussion and anticipates great things moving forward.

According to The Beck Group Managing Partner/CEO Peter Beck, "The feedback and ideas provided by the users group was detailed, complimentary, indicative of the innovative nature of the users, and will no doubt lead to some terrific improvements to DProfiler™ in the months ahead."

About Beck Technology Ltd.

Originally an internal group within an integrated architecture and construction firm, Beck Technology is a uniquely positioned software company creating technologies to improve the early decision making process in preconstruction. Beck Technology's flagship program, called DProfiler™, enables highly accurate conceptual budgeting by integrating 3D modeling and real-time cost estimating. AECO teams can more effectively evaluate project alternatives and clarify the scope before moving into design development. Since 2006, Beck Technology's BIM software and services have been used by AEC firms across North America. www.Beck-Technology.com
