

Benefits of Profiler

DESTINI Profiler (DProfiler™) is the most comprehensive project analysis tool in the building design and construction industry. Notable benefits to the project team include:

Lower Risk/Improve Predictability

DESTINI Profiler combines the visual verification + data capturing capabilities in a single model and therefore provides a major breakthrough in predictability. Formulas drive costs on each system based on the specific design, materials, site conditions, phasing, and other parameters that produce much more accurate information in a given time period.

Better Communication

DESTINI Profiler gives the team a clearer way to review the proposed design and understand the assumptions and the cost drivers. Less will fall through the cracks and the team will have better alignment of scope, cost, and schedule.

Rapid Alternatives

DESTINI Profiler uniquely provides data in real-time as the graphical model is being developed or changed. Alternative concepts can be easily explored all while seeing the cost and other data update in real time. The design-estimate cycle time is often 10x shorter than traditional processes.

Knowledge Rules

In DESTINI Profiler, you can develop a tailored “kit of parts” database that captures the rules of thumb your firm repeatedly observes. This will allow your firm to leverage your company historical data as an asset by anyone who has access to the program.

Reduction of Rework

Specialization in AEC has created silos that cause immense rework as activities are performed out of sync and by different parties. DESTINI Profiler enables more collaboration and reduces rework.

Engages All Stakeholders

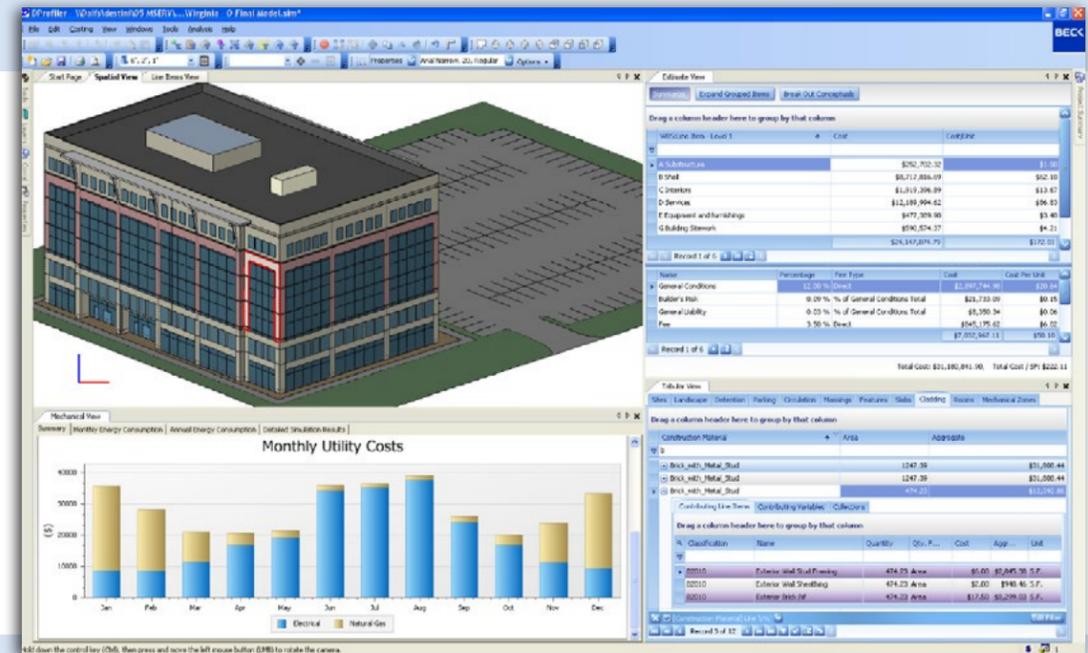

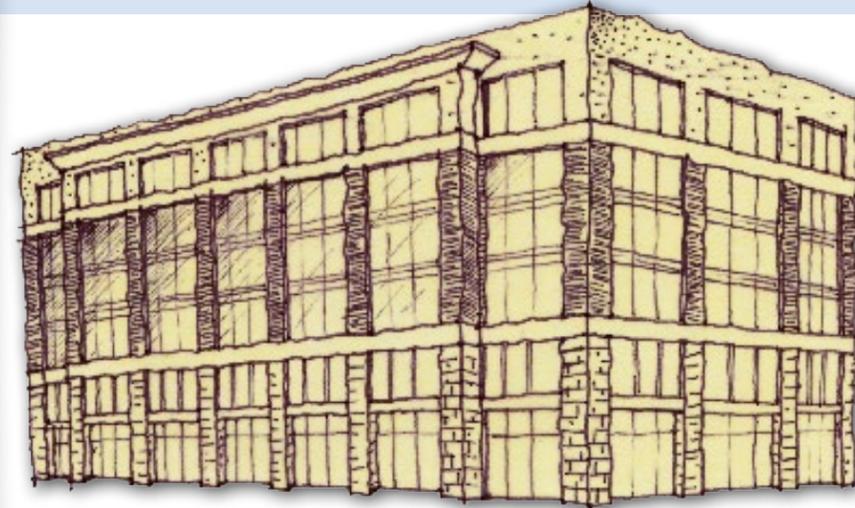

Studies show that only a fraction of the human population can look at 2D and visualize in 3D. There may be even fewer people who can stay enthusiastically engaged while reviewing a detailed cost estimate and scope clarifications document. It is crucial that all the major stakeholders can visualize the end product and understand exactly what is included in the budget. Project after project, DESTINI Profiler proves to be the perfect tool to bring different people together for a common goal.

PROFILER

The idea behind DESTINI Profiler is simple; when a 3D model is created the software gives instant feedback on data such as cost, energy, lifecycle, cut and fill, and schedule. Users can evaluate trade-offs across disciplines to find the best overall solution. DESTINI Profiler is easy to learn and use, even for those with no prior modeling experience.

Start with a concept ...

... rapidly create a 3D cost model

DESTINI Profiler is an industry acclaimed technology that helps facilitate more informed decision making, target value design, integrated project delivery, and lean methodology. Notable product features include:

- Simple and Easy to Use 3D Modeling
- Flexible Data Consumption
- Multiple Project Starting Points
- Customizable Reporting
- Integrated Analysis
